

What is an Airport?

It may seem a complex question, but it is not. There are multiple answers, but for Ikusi an Airport is not just a critical infrastructure with a set of processes concurring in an efficient manner.

It is a living being.

Ikusi provides state-of-the-art Airport Solutions that aim for Efficient Airports and Happy Travelers.

We have proven capacity implementing the operational procedures and automated processes that are required within the Airport Collaborative Decision Making philosophy, which enables collaboration between stakeholders, reducing delays, increasing predictability of events and optimizing the utilization of resources.

We also provide Airport Operational Databases combined with Resource Management Systems. The AODB creates a genuine single set of operational data that is intuitive and user-friendly, serving as an operations automation tool.

These systems manage the information assigning internal resources such as boarding gates or check-in desks, updating flight status with standard messaging, billing these services to the airlines and distributing information to the rest of the systems at the airport. They allow ground handling, airport and airline staff to take well-informed and timely decisions.

Flight Information Display Systems are paramount within Ikusi's offer. We have one of the most advanced and proven systems in the market, suitable for airports of any size and profile.

providing the Airport with logical security as well as physicall security.

Finally, Ikusi, as a Master System Integrator, is a reputed supplier of the site which bears the responsibility for ongoing improvement of the core airport processes: the Airport Operation Control Center.

Ikusi builds an environment that encourages easy decision making, integrating data from all different systems at the airport, applying business rules of predefined airport processes and achieving continuous improvement using a scalable and modular hardware platform.

With over 35 years of experience, we continue asking ourselves what an airport is, because only by asking questions we will be able to meet the ever changing and demanding needs of a sector that is continuously evolving.

Our expertise has led us to master the Systems and Processes that make possible improving the efficiency and profitability of an Airport. That is how we can help you operate your airport safely, smoothly and efficiently

A place where feelings and emotions meet, full of welcomes and goodbyes, celebrations, waits and even shopping sprees for our loved ones.

How can Ikusi help you deliver Airports that will let emotions flow without interference?

As a result, we can achieve reduced passenger waiting times, reduced apron and taxiway congestion that benefit the environment and increased real time information sharing and Business Intelligence.

Furthermore, we offer a content managemen module that can be integrated in the FIDS that allows for additional direct income via advertising or indirect income via increased commercial activity.

Security Systems are especially critical for Airports. Ikusi's long experience in this field will allow you to manage all Airport Security Systems under "one-roof" thanks to its fully integrated security platform that includes the Access Control System, Video Surveillance System, Perimeter Intrusion Detection System and Fire Alarm System.

All the information is interrelated and managed centrally. Thanks to our automatic decision module and our flexible and scalable solution, continuous improvement and global management of security are now a reality. Our solution allows decision makers to make timely decisions, manage events and solve emergency situations in a hasty and efficient manner.

so that nothing will interfere with the human processes that are inherent to its nature.
